

Send six fields.

See what may be hiding in your MRO item master.

A NO-COST, LOW-RISK PLACE TO START

No system access. No write-back. No changes to your ERP/EAM or PIM.

We will analyze a sample of your MRO master for likely duplicates, incomplete manufacturer information, inconsistent descriptions, and units-of-measure discrepancies that make the right part harder to identify, source, and manage.

START HERE - NO COST

MRO Item Master Health scan in days

A fast, first look at where MRO item records may represent the same item, lack critical identifying information, or use inconsistent naming conventions and units of measure.

SIX FIELDS TO SEND:

1. Material / Item number
2. Item description
3. Manufacturer name + part number
4. Supplier part number (if available)
5. UPC and alternate identifiers (if available)
6. Primary unit of measure

NEXT STEP

Expanded analysis

ADDITIONAL DATA MAY INCLUDE:

- Item classification and hierarchy
- Inventory quantity, value, and location
- Purchase and usage history
- Cost, supplier, and lead time information
- Stocking parameters and asset associations (if available)

Add operational context to validate likely matches, quantify business exposure, prioritize remediation, and identify where improved item master quality can reduce cost and risk.

Discuss an expanded analysis

WHAT YOU RECEIVE

01 MRO Item Health snapshot

See the concentration of potential duplicates, missing manufacturing information, description inefficiencies, UOM issues, and classification gaps.

02 Priority review list

Receive a reviewable list of the records and problematic patterns with the strongest signals.

03 Findings walkthrough

Review what we found, what can be addressed with the existing data, and where operational data could uncover greater exposure.
